

COMP 519 Web Programming

Here's some basic information regarding the course structure.

Lecturer: Russell Martin, Ashton Building 319

Office Hour: Wednesdays 11:00am-12:00pm

Webpage: <http://www.csc.liv.ac.uk/~martin/>

e-mail: Russell.Martin(at)liverpool.ac.uk

Class times: Monday 2:00pm, Wednesday 10:00am (Brodie Tower, room 702)

Tutorials: Monday 4:00pm, Friday 10:00am (but sometimes a tutorial might be used for a lecture)

Tutorial location: Holt Building, room 113 (Lab 1)

Course topics covered include HTML, Cascading Style Sheets (CSS), Dynamic HTML and JavaScript, forms, CGI scripting, Python, PHP, SQL, and Java applets.

Course webpage: <http://www.csc.liv.ac.uk/~martin/teaching/comp519/>

There will be four programming assignments (75%) and a multiple-choice final examination (25%).

Note: It is expected that students have sufficient initiative and time for completion of the course assignments. It should also be noted that the final assignment is (provisionally) during Week 12 (Dec 14-18, probably Dec 16).

The assignments will be posted online on the course website.

Plagiarism and collusion: Students are free to discuss **ideas** about how to complete the assignments, but the actual code they write should be their own, or credit should be properly given in comments in the source code of the file(s). You are, of course, free to use examples, code, etc from the course notes, but clear credit should be given for other code examples/fragments used from other sources. If you have substantial conversations with other students about ideas for an assignment, you should note that as well.

Discussions with others (and consultation of the massive online sources available) are a valuable way of learning this material, but you should not claim ideas as your own when they are not.

Note: There are no exemptions to the final examination.
