

# Knights, Knaves, and Logical Reasoning

Fabio Papacchini\*

## 1 Puzzles

In these exercises, you have met two natives (called, imaginatively, A and B) and you wish to establish as much information as you can about their status as knights or knaves. Remember, everything a knight says is true and everything a knave says is false.

1. A says “We are both knaves”.
  - A is a  Knight -  Knave
  - B is a  Knight -  Knave
2. A says “If I am a knight, then so is B”.
  - A is a  Knight -  Knave
  - B is a  Knight -  Knave

## 2 Use the Trick!

Fill the truth table and solve the puzzles!

1. A says “We are both knaves”

Using the trick it becomes  $k_A \leftrightarrow$  \_\_\_\_\_

| $k_A$ | $k_B$ | _____ | _____ | _____ | $k_A \leftrightarrow$ _____ |
|-------|-------|-------|-------|-------|-----------------------------|
| F     | F     |       |       |       |                             |
| F     | T     |       |       |       |                             |
| T     | F     |       |       |       |                             |
| T     | T     |       |       |       |                             |

---

\*Special thanks to Francis Southern, who contributed significantly to this material!

2. A says “If I am a knight, then so is B”

Using the trick it becomes  $k_A \leftrightarrow$  \_\_\_\_\_

| $k_A$ | $k_B$ | _____ | $k_A \leftrightarrow$ _____ |
|-------|-------|-------|-----------------------------|
| F     | F     |       |                             |
| F     | T     |       |                             |
| T     | F     |       |                             |
| T     | T     |       |                             |

### 3 Sudoku

|   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|
|   |   |   | 7 |   |   | 4 | 1 |   |
|   |   | 3 |   | 2 |   |   |   | 6 |
| 1 |   | 7 | 4 |   |   | 5 | 2 | 3 |
| 4 |   | 1 | 6 |   |   |   | 8 |   |
|   | 2 | 9 |   | 7 |   | 6 | 3 |   |
|   | 7 |   |   |   | 4 | 2 |   | 1 |
| 7 | 5 | 2 |   |   | 6 | 3 |   | 9 |
| 3 |   |   |   | 4 |   | 1 |   |   |
|   | 1 | 4 |   |   | 3 |   |   |   |

### 4 References

- I recommend heavily everything by Raymond Smullyan. In preparing this lesson we referred to his puzzle books *What Is the Name of This Book?* *The Riddle of Dracula and Other Logical Puzzles*, *Forever Undecided* and *The Lady or the Tiger?*.
- [www.cut-the-knot.org](http://www.cut-the-knot.org) and [www.khanacademy.org/](http://www.khanacademy.org/) have sections on knight and knave puzzles, as well as a huge number of other mathematical topics.
- Or you can simply look up *propositional logic* on Google or Wikipedia.
- For more advanced reading, Smullyan has a more academic book called *First-order Logic*, which is quite a step up in difficulty from what we’ve done today, but excellent nevertheless. A slightly more gentle, but still very rigorous book, is *A Mathematical Introduction to Logic* by Herbert Enderton. Of course, there are many other possibilities out there.

- Another more advanced source is the Stanford Encyclopaedia of Philosophy (not just of interest to philosophers!). An interesting starting place might be <http://plato.stanford.edu/entries/reasoning-automated/>.
- A classic informal introduction to formal systems *Gödel, Escher, Bach: An Eternal Golden Braid* by Douglas Hofstadter.
