COMP283 Assignment One - Scenario Four
The Local Social Network

The University of Liverpool would like to setup a new social network, initially aimed at students and staff at Liverpool University. The social network is to be known as LivBook. Users of the network can sign up to it and get an account. They may then post messages and photos and comment on the postings of other users. Messages may be posted to specific groups of users or individuals

You have started working in the Computing Services Department at the University and have been tasked with developing a database system to maintain information regarding the new social network. Your database system should at least be able to do the following:

Manage user accounts containing information about users.

Handle messages created by users, monitoring who should receive a message and whether a user has seen it or not.

Audit the distribution of a message.
